

Ambassadors App

Team Lead: to be decided between you · Team: Flutter Development · Duration: ~8 weeks · Status: Kickoff

The one-line version

Build a Flutter app where **ambassadors sign up, share products, and earn points** for every real order they bring in — wrapped in a **gamified system** (points, tiers, leaderboard) that keeps them motivated and competing.

Why this matters: Ambassadors are people who promote Maamora to their own network and get rewarded when their friends actually buy. Done right, they become a cheap, powerful way to bring in new customers. This app is what makes them want to keep sharing — by turning it into a game they can win.

The most important thing to understand

The game is worthless if the tracking doesn't work. The whole app depends on one thing: when someone buys through an ambassador's link, the system must **correctly credit that ambassador**. This is called *attribution*. Build and prove this **first**. A beautiful leaderboard that credits the wrong person — or nobody — is worse than no app at all. Get the link → order → ambassador chain working before you build any of the fun stuff.

What you're building, feature by feature

1 Sign up & onboarding

An ambassador creates an account and gets set up. Simple, fast, mobile-first.

2 Share links & share-cards

Each ambassador gets a unique link (and a nice shareable product card/image) they can send on WhatsApp, Instagram, etc. The link carries their code so we know who shared it.

3 Attribution (the engine room)

When a shared link leads to a **completed COD order**, the system ties that order back to the ambassador who shared it. This connects to Maamora's existing order backend. **This is the hard, important part.**

4 Points & tiers

Ambassadors earn points per completed order and climb tiers (e.g. Bronze → Silver → Gold). Start simple: points on completed orders, a few tiers. Nothing fancy yet.

5 Leaderboard

A ranking screen showing top ambassadors. This is the competitive heart of the game — it's what makes people want to do more.

6 Rewards / earnings view

Each ambassador sees what they've earned and how to get their reward. **Confirm the exact reward-per-order with the founder before building this screen** — the numbers must be real.

7 Notifications & admin view

Push notifications ("you earned points!", "you moved up to Silver!") to keep people engaged, plus a simple admin screen so the founder can see how each ambassador is performing.

Suggested tech

You're the Flutter experts — final call is yours. This is just a starting point:

Flutter the app itself Firebase Auth sign-up Deep links share-link tracking Maamora backend API orders & attribution

Suggested split (3 roles, one app)

So you're not stepping on each other or waiting around. Decide between yourselves who takes which role:

The Leader	Attribution + backend integration — the link → order → ambassador chain. Owns the hardest, most critical piece and coordinates the three of you.
The System	Auth, onboarding, share links & share-cards, points engine — the plumbing that everything runs on.
The Front	Gamification UI — leaderboard, tiers, rewards screen, notifications. The part ambassadors actually see and feel.

Milestones (roughly one per week)

- Week 1** — Setup + planning. Data model (ambassador, link, order, points), wireframes, agree the split above, project skeleton running.
- Week 2** — Auth + ambassador onboarding flow working end to end.
- Week 3** — Share-link + share-card generation with the ambassador's code baked in.
- Week 4** — **Attribution.** Prove a shared link → a completed order → credited to the right ambassador, using real test orders.
- Week 5** — Points engine on top of attribution. **Test the full loop with 5-10 real ambassadors** — even manually — to confirm it actually works before polishing.
- Week 6** — Leaderboard + tiers screens.
- Week 7** — Rewards/earnings screen + push notifications.
- Week 8** — Admin view, polish, testing, and a short README / demo.

Definition of done

- An ambassador can sign up and get their own share link + share-card.
- A completed COD order from that link is **correctly credited** to the right ambassador.
- Points are awarded automatically on completed orders; tiers update.
- The leaderboard shows real, live rankings.
- Each ambassador can see their points, tier, and earnings.
- The founder has an admin view of ambassador performance.
- Tested with at least **5 real ambassadors** driving real orders.

Ground rules:

- **Attribution before gamification.** If crediting the right ambassador isn't rock-solid, nothing else matters — fix that first.
- **Rewards must be real.** Get the exact reward-per-order from the founder before building the rewards screen. Never show a number you can't pay.
- **Keep v1 simple.** Points, tiers, leaderboard. No badges, streaks, or quests until the core loop is proven and working.

When you get stuck: this project is yours to own. Check the Flutter docs, search the error, and try a smaller version of the problem first. Talk to each other — three of you means someone probably already hit it. Whoever takes the lead role handles coordination and the tough calls. The goal is for the team to solve it yourselves.
